MicroCHIPS Inc Upgrades Phone System and Chooses
Data Evolution's NEC DSX solution.

Chelmsford, MA – December 4, 2009

Data Evolution LLC, an advanced IT services firm in Greater Boston and Southern New Hampshire, has recently installed a new NEC DSX-160 phone system for their customer MicroCHIPS Incorporated.

MicroCHIPS old Norstar system was end of life for support and not working well and would be expensive to upgrade and keep under contract. Data Evolution recommended a NEC DSX-160 system; the cost of the new system was less expensive than upgrading their current Norstar, including new phones for all the end users. Their new system includes a voicemail to email feature as well as the ability for call forwarding to remote numbers.

“Our NEC PBX solution is a great fit for any size client, It can expand from a small, three-person configuration to solution that fits the client as they grow,” said Steven Vigeant, co-founder of [Data Evolution, LLC](http://www.dataev.com). “With features like remote call forwarding, voicemail to email and application based administration interface, this solution can compete with phone systems costing a whole lot more.”

Data Evolution LLC provides IT consulting and support services to startup, small and medium-sized companies in the Greater Boston and Southern New Hampshire area. Managed services, remote helpdesk support, telephony solutions and cloud-based services are just a few of the offerings provided by Data Evolution LLC. Steven R. Vigeant and Michael H. McInnis started Data Evolution LLC in 1998 and bring over 30 years of experience to the company. Data Evolution LLC is headquartered in Chelmsford, MA with a business office in Goffstown, NH.
